

Viora Treatments
with PCR™ Technology

V I O R A
Shape the Future

Hair Removal | Skin Rejuvenation | Pigmented | Vascular Lesions | Acne

Viora welcomes you to leaf through the following images of actual patients who have undergone our treatments. Speak with your practitioner today to learn more about how Viora's technology can work for you!

PCR™ takes full advantage of adjustable pulse types and duration in order to perform an array of treatments. Talk to your practitioner today to find out how Viora's exciting, proprietary technology can give you long term, life changing results!

Hair Removal: By using the dedicated hair removal filters, light beams directly arrive at the target tissue heating up and destroying the hair bulb while the surrounding tissue remains intact via the selective photo-thermal effect. This gold standard in laser treatments has the ability to penetrate deeper than any other type of laser and features high levels of comfort with powerful contact cooling

Acne Clearance: With a precise filter, light penetrates the skin and destroys the bacteria (P. Acne Bacterium) which causes acne through the photo thermal-chemical effect.

Pigmentation reduction: The pigmented lesion contains high concentrations of melanocytes. The light absorbed in the lesion creates a controlled burn localized to the target which peels away along with the spot a few days after treatment leaving an even skin tone.

Vascular treatment: Targeting the epidermal and dermal layers, light heats the target blood vessels, causing coagulation of specific proteins in blood vessels, and in turn leading the body to naturally remove them.

Skin Rejuvenation: Photo-rejuvenation targets skin cells by coagulation and necrosis of dermal and epidermal layers. The body naturally responds to this by creating new cells causing an overall skin renewal to the treatment area.

BEFORE

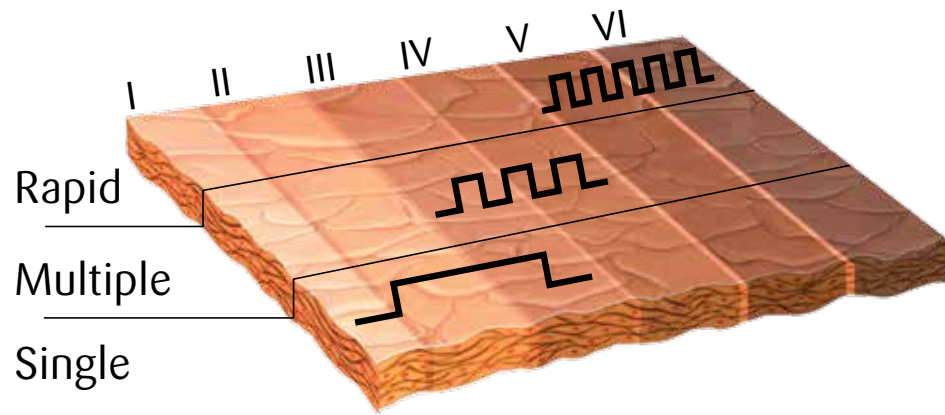

AFTER 5 TX

“ It took getting engaged to finally do something about the hair growth on my chin and lip. I was not hopeful after having to shave every day. I went to an electrologist who had a new IPL and after 2 treatments, I had to call to reschedule my third treatment because I had no hair to treat. I know I'm not done, but my skin looks so much clearer with less breaking out from the hair growth and that's after 2 treatments. It's already changed my life. ”

Elizabeth, Beverly, MA

PCR™ generates various pulse structures and provides adjustable pulse duration—from single to multiple to rapid pulse—ensuring that every skin type and condition can be treated. By allowing the flexibility and customization of the pulse configuration, treatments can be personalized according to a variety of symptoms and needs.

“ I’ve tried a number of tactics to treat my vascular lesions and have always been disappointed. I finally found a dermatologist offering the Viora laser treatment. The few short treatments have changed my life – the results are incredible and I’m thrilled that I was finally able to get this problem taken care of. ”

Viora Treatments
with **CORE™** Technology

V I O R A
Shape the Future

Cellulite Reduction | ST | Contouring | ReFit | ReLift | ReVive

Viora welcomes you to leaf through the following images of actual patients who have undergone our treatments. Speak with your practitioner today to learn more about how Viora's technology can work for you!

Viora's CORE™ - a proprietary multi-channel radiofrequency technology is incorporated within a variety of Viora's leading medical aesthetic devices. CORE™ technology gives you painless, shorter treatment sessions, while delivering results that can be seen.

Cellulite Reduction: With cellulite affecting over 85% of the female population, there's an ongoing quest by women to do something about it. And this pursuit in improving our appearance is not limited to cellulite reduction. Most women also want to help nature by reducing an excess curve here or there.

ST: Over time, with age, our skin has a natural tendency to sag and lose elasticity. In addition, nature isn't necessarily our friend as external factors like sun exposure and other environmental pollution influence our skin's building blocks. Adding insult to injury, smoking also plays havoc with our skin's condition.

ReFit: When we gain weight, our skin expands and re-modulates to accommodate the excess fat underneath. Losing a lot of weight quickly, whether via diet, exercise, childbirth or surgery, the skin remains enlarged, leading to redundant skin and stretch marks.

ReLift: With age and gravity, the appearance of fatty jowls takes its toll on our skin. This can result in the loss of skin tissue, making you look older than you actually are.

ReVive: If you're suffering from stretched and lax vulval tissue, whether from childbirth, genetics, trauma, age or loss of weight, Viora has a non-surgical solution that can help you. ReVive from Viora corrects labial laxity, tightening the skin tissue folds, painlessly and effectively, with no anesthesia or downtime.
